

Phone Number Verify API

Questions: **954.903.0834**

RoboTalker's Phone Verify API is a simple way to verify phone numbers in your website before saving the information in your database. Add a script to your website and we will send a text message with a 4-digit code to the phone number provided allowing them to insert into the popup to confirm their phone number. If the phone is a land line we will provide the code in spoken form via text to speech to allow the person can enter the code in the required field. The code will be delivered to live answer and left on voicemail.

With our Phone Number Verify API you can do the following:

Send text messages with a code that users enter into OUR JavaScript popup on YOUR webpage.

Make a phone call with the code spoken for phone numbers that fail the text message code delivery.

Java script interface or server-side FORM POST, you decide. <https://RoboTalker.com/api/verifyPhone.js?key=userkey>

API returns PASS / FAIL for each

Send out multiple messages in one POST to a Robotalker predefined contact GROUP by name.

Phone Number Verify API url: <https://RoboTalker.com/api/PhoneVerify.ashx>

1) Get your user key from inside the portal:

Locate your key here:

The screenshot shows the 'Account Information' section of the RoboTalker portal. A table lists various account details. The 'Z-Key' row is highlighted with a red circle, and its values are also circled in red.

Item	Value
UserId	8
Z-Key	C953881BC38662FE94 C1CF90C538979AE20AC51689
Z-Token	90C57789818820EE
z-userId	8
Zip Code	33308

Showing 21 to 25 of 25 entries

Update Your Default Settings

2) Insert this Code inside your webpage that contains the form that collects contact information:

```
<script>  
https://RoboTalker.com/api/verifyPhone.js?key=KEYGOESHEREXXXXXXXXXXX  
</Script>
```

3) You may use verify API server side by providing the information in a post to the handler.

```
<server-side post>  
https://RoboTalker.com/api/verifyPhone.ashx  
FORM POST:  
key=KEYGOESHEREXXXXXXXXXXXX  
phone=xxxxxxxxx  
countrycode=44  
lang=english  
</server side>
```

Then you can verify the code they input:

```
<server-side post>  
https://RoboTalker.com/api/verifyPhone.ashx  
FORM POST  
code=1234  
phone=9543535353  
</server side>  
RETURNS: success / failed
```

Job Variables for SERVER-SIDE POST:

key: You can find your key in the account details section of the Message Manager

code: The code that the user supplied to be confirmed by us as valid.

phone: The phone number to verify by text message or phone

lang: Browser Language TWO DIGIT CODE (only required for server-side post)

countrycode: phone country code prefix (only required for server-side post)

(All parameters are lowercase)
